AR You Ready?

Become Part of the Research Community at Mittweida University of Applied Sciences

In the Virtual Technologies Professorship, we conduct research focused on virtual and augmented reality, and regularly carry out studies in virtual environments.

We are looking for people who are curious and eager to try new things. Diverse perspectives help us to better understand and further develop virtual and mixed reality applications. In this way, you can make a small but important contribution to ongoing research and future development.

Please feel free to sign up for our online participant list and become part of our research. When we are looking for test participants for a project, we will contact you with all the important information. You are then free to decide whether or not to participate.
